## EONS Cancer Nursing Index 2020-2022©

## National profile: Finland

## Introduction

In the <u>RECaN project</u> EONS highlighted important differences in cancer nursing across Europe. The EONS Cancer Nursing Index (ECNI) was developed by the <u>EONS Advocacy Working Group</u> to illustrate the development and status of this profession in Europe. The index (with scores from 0-100) covers the following dimensions: Education and Career Development, Patient and Occupational Safety, Recognition, Working Conditions and Impact and Workforce statistics. The results from the ECNI 2020 have been used to highlight the importance and impact the recognition of European cancer nursing. More information on ECNI 2020 including national profiles for each county could be found <u>here</u>

The ECNI 2022 also include data on staffing levels and cancer nurses' experiences from the covid-19 pandemic. However, these data are not included in the national profiles since no comparison data from 2020 is available. These data will be presented separately.

The ECNI 2022 focuses more on the experiences from the responding cancer nurses' workplaces (rather than the national perspective), allowing for the great regional and local variety indicated in the ECNI 2020 data. The Index is based on data from the following sources:

- 1. EONS Survey on Patient and Occupational Safety (anonymous survey among cancer nurses, 2020 and 2022 respectively)
- 2. Work force statistics (obtained from ec.europe.eu/Eurostat and OECD in 2020). When the ECNI 2022 were completed, no updates had been published so both ECNI 2020 and 2022 include the same scores.

A scoring system was developed to reflect the level of development for the different Index dimensions/items. For items with a variety of responses from the same country, the most frequently reported response was used. The purpose of the Index is primarily not to rank some countries as better than others, moreover to illustrate cancer nursing profiles, differences and areas in need of development. The Index could be used to aid the development of cancer nursing in each country as well as for general European progress.

The ECNI offers a snapshot of the current status in cancer nursing across Europe, reported by the profession. The results largely depend on number of and profiles of responses from each country.

| Dimension/item   | Maximum<br>score | Mean<br>general<br>score 2022<br>(min-max) | Score<br>2020 | Score<br>2022 | Comments |
|--|------------------|--|---------------|---------------|----------|
| OVERALL SCORES   | 100              | 55 (19-84)                                 | 70            | 64            |          |
| EDUCATION AND CAREER DEVEOPMENT<br>(5 items presented below)   | 23               | 10 (0-23)                                  | 11            | 10            |          |
| Specialist education on university level   | 5                |  | 5             | 5             |          |
| EONS Cancer Nursing Framework recognized and<br>supported  | 5                |  | 0             | 3             |          |
| Master programs in cancer nursing  | 4                |  | 4             | 0             |          |
| Advanced cancer nursing roles established  | 5                |  | 2             | 2             |          |
| Professors in cancer nursing   | 4                |  | 0             | 0             |          |
| PATIENT AND OCCUPATIONAL SAFETY<br>(8 items presented below)   | 36               | 20 (0-33)                                  | 31            | 28            |          |
| Safety guidelines (hazardous drugs) available  | 5                |  | 5             | 5             |          |
| Guidelines during pregnancy (hazardous drugs)  | 5                |  | 5             | 5             |          |
| Pregnant and /or breastfeeding women assigned<br>other tasks that don't involve direct contact with<br>cytotoxic/radioactive drugs | 5                |  | 5             | 5             |          |
| Systematic testing for occupational exposure (surface swipes)  | 3                |  | 1             | 1             |          |
| Speak-up or whistle blower policy implemented for all members of staff   | 3                |  | 0             | 2             |          |
| Access to cytotoxic spillage kit and PPE   | 5                |  | 5             | 5             |          |

| Formal training before administering cytotoxic<br>drugs                                 | 5  |           | 5  | 2  | Various responses for 2022<br>To obtain the highest score (5)<br>for this item, formal education<br>should have been reported by all<br>responding nurses to be<br>obligatory before managing<br>cytotoxic drugs at all workplaces. |
|---|----|-----------|----|----|---|
| Nurses not preparing cytotoxic drugs  | 5  |           | 5  | 3  | Various responses for 2022  |
| WORKING CONDITIONS AND THE IMPACT ON<br>CANCER CARE (4 items presented below)           | 20 | 14 (9-17) | 14 | 15 |   |
| Level of adherence to European Working Time<br>Directive (EWTD)                         | 5  |           | 4  | 4  |   |
| Risk of negative consequences if asking for alternative duties pregnancy/breast feeding | 5  |           | 5  | 5  |   |
| To what extent hospital beds are closed due to<br>cancer nursing shortages              | 5  |           | 5  | 2  |   |
| To what extent cancer treatments were delayed due to cancer nursing                     | 5  |           | 0  | 4  |   |
| RECOGNITION (4 items presented below)   | 18 | 10 (0-15) | 11 | 8  |   |
| Does the country have a cancer nursing society?   | 5  |           | 5  | 5  |   |
| Does the country have a national cancer plan that includes nursing care?                | 3  |           | 3  | 0  |   |
| Does your workplace/center have Board positions dedicated for cancer nursing?           | 5  |           | 1  | 1  |   |
| To what extent is nurse-led cancer care implemented in your workplace/center?           | 5  |           | 2  | 2  |   |
| WORK FORCE STATISTICS (1 item)  | 3  | 1 (0-3)   | 3  | 3  |   |
| Number of practicing nurses/1000 citizens (www.europe.eu/Eurostat and OECD)             | 3  |           | 3  | 3  |   |

## Strengths and recommendations for improvements

The total score for Finland in ECNI2022 (score 64) was lower comparing with results from ECNI2020 (total score 70). Other countries with similar total score were Netherlands (total score 65), Cyprus (total score 63), Norway (total score 63) and Belgium (total score 61). Total scores for all of those countries decreased in ECNI 2022.

In comparison with other Scandinavian countries, Finland received lower scores than Iceland (total score 84) and Sweden (total score 77), and slightly higher than Norway (total score 63). All Scandinavian countries received a maximum score in Workforce statistics.

Finland received high score (score 28) for Patient and Occupational Safety – congratulations! Only Malta, Czech Republic and Netherlands scored higher. If all Finnish nurses were provided with formal training before administering hazardous drugs, the score could have been even higher. Areas related to safety that could be improved are systematic testing for occupational exposure and implementation of whistle blower/speak up policy at all workplaces. What is more, Finnish nurses reported that they are still involved in preparation of hazardous drugs. In majority of European countries those tasks are performed by pharmacists in strictly controlled environment.

Finland could improve their scores for Education and Career Development dimension if advanced cancer nursing roles and nurse-led cancer care were implemented and recognized on a national level and also if Finland had appointed professors in cancer nursing.

Finally, if all cancer centers had a dedicated board nursing position and if more Finnish cancer nurses were familiar to EONS Cancer Nursing Education Framework, the scores would also be higher.
